

**TWO POSITIONS FUNDED BY TUBITAK 1001 GRANT,  
AVAILABLE FOR CURRENT OR PROSPECTIVE M.S. OR PH.D.  
STUDENTS**

Two positions, funded by a 3-year grant from the Scientific and Technological Research Council of Turkey (TUBITAK), are available for current or prospective M.S. or Ph.D. students. Led by a multi-disciplinary team (Associate Prof. Volkan Rodoplu, Prof. Cüneyt Güzeliş, and Prof. Deniz Türsel Eliiyi) at Yaşar University in İzmir, Turkey, this project at the intersection of IoT and machine learning is expected to position the candidates strongly for industrial R&D and academic jobs upon their graduation.

For both positions, the candidates must be enrolled in a M.S. or Ph.D. program at some university in Turkey. (Candidates are not required to be enrolled at Yaşar University. However, those who wish to apply to the M.S. or Ph.D. program in Electrical-Electronics Engineering at Yaşar University must do so by the following deadlines: January 1, 2019 at <https://apply.yasar.edu.tr/> for non-Turkish citizens, and January 18, 2019 at [https://obs.yasar.edu.tr/oibs/ogrsis/basvuru\\_login.aspx](https://obs.yasar.edu.tr/oibs/ogrsis/basvuru_login.aspx) for Turkish citizens. A 100% tuition waiver is available for qualified M.S. and Ph.D. candidates. In regard to Ph.D. admissions, non-Turkish citizens should read <https://apply.yasar.edu.tr/courses/course/98-phd-electrical-and-electronics-engineering>, and Turkish citizens should read <https://fbe.yasar.edu.tr/basvuru/ogrenci-kabul-sartlari/> and <https://fbe.yasar.edu.tr/basvuru/kontenjan-ve-burslar/> before they apply.)

**POSITION # 1: TUBITAK 1001 SCHOLAR IN NETWORKING**

This scholar will develop computer network simulations (on a simulator such as ns3) in order to implement the machine-learning based joint forecasting-scheduling algorithms for IoT. The ideal candidate has a strong background in C or C++, prior experience in large-scale software development, and a keen interest in IoT, networking and machine learning.

## POSITION # 2: TUBITAK 1001 SCHOLAR IN MACHINE LEARNING

This scholar will develop and test novel machine learning algorithms (in MATLAB or a similar environment) for joint forecasting-scheduling. The ideal candidate has a strong background in mathematics and MATLAB, prior experience in developing large-scale programs, and a keen interest in machine learning, IoT and networking.

The ability to work effectively in a fast-paced, multi-disciplinary team is required for both positions. The candidate must have high ethical standards, a strong commitment to research, and an excellent command of English.

Each scholar position provides a salary of 2500 TL/month for Ph.D. scholars and 2200 TL/month for M.S. scholars, if the scholar is not concurrently employed elsewhere, and a supplement of 500 TL/month for Ph.D. scholars and 400 TL/month for M.S. scholars, if the scholar is concurrently employed elsewhere.

Applications for both positions should include a detailed C.V. and a cover letter. (A candidate, who has the requisite background, may apply for both positions.) Prior publications are not required; however, a candidate with a publication record should include a PDF file of his/her best work. Applications will be considered until both positions have been filled. The application package should be sent by email to Associate Prof. Volkan Rodoplu (Project Director) at [volkan.rodoplu@yasar.edu.tr](mailto:volkan.rodoplu@yasar.edu.tr).
